# Hort Management: For Landscape Managers

**Svoboda Pennisi**, Vincent J. Dooley Professorship in Horticulture; Emphasis: Commercial & sustainable landscape; pollinators

**Cesar Escalante**, Professor

Bulletin 1261 published on December 20, 2016

HORT Management is an allied computer program for estimating landscape management costs. This software assists the user in estimating labor, material and equipment costs on a particular job, a break-even price, and bid price on a job. Industry average data and time/task data is used throughout the program, such as the time it takes to mow 1,000 sq. ft. with a certain size mower and equipment cost per hour of operation. The user is encouraged to modify and tailor the program with his own data and costs.
