Best Practices: Animal Intrusion in Specialty Crops

Laurel Dunn, Associate Professor and Extension Coordinator

Andre Luiz da Silva, Assistant Professor; Area of Interest: Vegetables

Govindaraj Dev Kumar, Associate Professor

Circular 1170 published on November 6, 2023

Wildlife intrusion into produce fields is a common problem for fruit and vegetable growers and presents a food safety risk when fecal contamination occurs. This video discusses best practices regarding no-harvest buffer zones (used when feces is present in the field), removal of in-field contamination, and worker training in several different scenarios.
