Management of Insects for Vegetable Production in Georgia, Part 2: Whiteflies

Alton Sparks, Professor

Laurel Dunn, Associate Professor and Extension Coordinator

Andre Luiz da Silva, Assistant Professor; Area of Interest: Vegetables

Govindaraj Dev Kumar, Associate Professor

Circular 1172 published on March 26, 2020

Whiteflies are a concern for Georgia's vegetable industry, both as a direct pest and a vector for viruses. This brief video discusses at risk crops, shows plant damage, and describes what conditions increase the likelihood of whitefly damage. Frequent scouting and consistent insecticide use throughout the growing season are critical for control of the pest itself as well as for the plant viruses that whiteflies transmit.
