Best Practices: Postharvest Water Sample Collection

Laurel Dunn, Associate Professor and Extension Coordinator

Andre Luiz da Silva, Assistant Professor; Area of Interest: Vegetables

Govindaraj Dev Kumar, Associate Professor

Circular 1192 published on October 27, 2023

Water testing is required for many postharvest water uses on farms covered by Primus audits or the U.S. Produce Safety Rule. However, despite its relatively straightforward nature, food safety educators frequently receive questions regarding sample collection best practices. This brief video describes how, when, and where to collect a postharvest water sample intended for generic *E. coli* testing, as required by the Produce Safety Rule for produce wash water.
