# Storm Damaged Tree Cleanup

**Alfredo Martinez**, Professor and Extension Plant Pathologist-Turfgrass, Small Grains, Non-Legume Forages

**Ellen Bauske**, Senior Public Service Associate

Circular 1199 published on May 15, 2023

Trees are often damaged in storms and can be extremely dangerous to clean up. Storm damaged trees are subject to all the perils associated with tree felling and much more. Working conditions may be difficult. Downed trees may be entangled in other trees, or tossed on buildings, vehicles, or wires. Energy stored in compressed limbs and trunks can be release suddenly, explosively, and fatally. Each situation is unique and requires careful consideration. Application of the included five-step cutting plan will help keep the saw operator safe and working effectively. Authors include E.M. Bauske, P. Kelley, W. Williams, and A. Martinez-Espinoza.
