

# MOSQUITO CONTROL

## OPTIONS FOR COMMERCIAL AND GOVERNMENT ENTITIES

Elmer W. Gray, Entomologist

Mosquito control operators are required to conform to the Clean Water Act (CWA) and be permitted by Georgia's National Pollutant Discharge Elimination System (NPDES). The state NPDES is managed through the Georgia Environmental Protection Division (404) 657-5947. A Notice of Intent (NOI) must be submitted to the EPD within 30-days of making a pesticide application that contacts "waters of the state." The Georgia Mosquito Control Association website ([gamosquito.org](http://gamosquito.org)) has comprehensive information about these regulations.

An integrated approach is the most effective and efficient manner to conduct mosquito control. Insecticide resistance is a significant consideration in many areas and an integrated approach is essential to minimize this risk. Education, source reduction, surveillance, larviciding and adulticiding form the progression of this approach (Extension Circular 1154). The University of Georgia Cooperative Extension service can be reached at (706) 542-2816 for additional information related to these matters.
